Table 1 details the volumes of allocations traded from one Cap valley to another Cap valley. It also includes an adjustment for entitlements permanently traded between three valleys, primarily from Victorian Murray and NSW Murray to SA Murray. This value adjusts the annual Cap target for each Cap valley. Sign convention follows positive (+) value as volume traded in and negative (-) value as volume traded out.

Cap Register: 1 July 1997 to 30 June 2015

Table 2 details the values for adjustment of annual Cap targets for environmental water. An annual Cap target as determined by hydrological models includes both consumptive and environmental water. The models do not usually remove environmental water from the annual Cap target. Since compliance with Cap is confined to consumptive use, the adjustment is made to remove environmental use.

Cap Register: 1 July 1997 to 30 June 2015

\* A debit amount but valley continued to maintain cumulative credits in Table 6. The valley is fully compliant and does not require a special audit under Schedule E of the Murray-Darling Basin Agreement.

\*\* Cap exceedance is subject to a special audit by the Independent Audit Group as per Clause 16 of Schedule E of the Murray-Darling Basin Agreement.

Table 5 details the annual balance in credit or debit after deducting actual diversions in Table 4 from annual Cap targets in Table 3 for each Cap valley.

Cap Register: 1 July 1997 to 30 June 2015

Table 8 is a comparison of the cumulative Cap credits with the previous year. Variations could be due to a more current model run, changes in trade and environmental adjustments and improvements in accuracy of actual diversions. Models are run each year to determine the annual Cap target. Where the model run produces a different target for the cumulative period than was obtained the previous year, a correction is made to the prior year's annual targets which results in variations in the cumulative balance.
